Overview of hospital stays in the United States, 2012: Statistical Brief #180
(PMID:25506966)
Abstract

This Statistical Brief presents data from the Healthcare Cost and Utilization Project (HCUP) on characteristics of inpatient stays in U.S. community hospitals in 2012. The distribution of type of hospital stay (surgical, medical, and maternal or neonatal) is presented for different characteristics (patient age, primary payer, and hospital region). Changes in hospital utilization and costs from 2003 to 2012
This Statistical Brief presents data from the Healthcare Cost and Utilization Project (HCUP) on characteristics of inpatient stays in U.S. community hospitals in 2012. The distribution of type of hospital stay (surgical, medical, and maternal or neonatal) is presented for different characteristics (patient age, primary payer, and hospital region). Changes in hospital utilization and costs from 2003 to 2012 are provided, along with changes in hospital utilization by primary payer and patient age. All differences between mean estimates noted in the text are statistically significant at the 0.0005 level or better. Differences between proportions noted in the text differ by at least 10 percent.

Differences between proportions noted in the text differ by at least 10 percent.

Although the homes for elderly people were the roots of America's hospitals during the Civil War around the 1960s, there were hospitals with doctors, nurses, professional and specialized departments as well as different types of services. Due to social development after the Civil War, the industrial revolution, immigration and advances in medicine, the development of hospitals in the United States increased.
